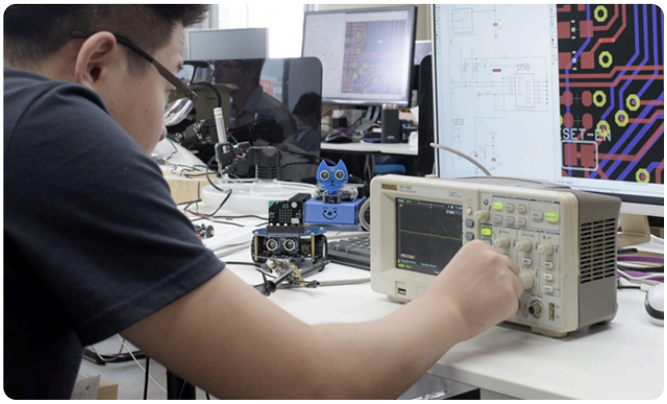
About Us

Waveshare has become a trusted partner for engineers, designers, and makers around the world.

Waveshare is a leading global provider of electronic components and modules for a wide range of industries, including robotics, IoT, education, and more. With a focus on quality, reliability, and innovation, Waveshare has become a trusted partner for engineers, designers, and makers around the world.

Founded in 2006, Waveshare is headquartered in Shenzhen, China, with additional offices in HK. Waveshare's product range is extensive, covering multiple areas such as microcontrollers, development boards, displays, sensors, wireless communication, and more. These products include LCD screens, touch screens, OLED displays, cameras, and others in

various sizes. Waveshare also provides software and documentation related to these products to help customers quickly start their development projects, all are designed to help customers bring their ideas to life.



Waveshare's products are used by hobbyists, students, and professionals alike, and are compatible with a variety of popular development platforms such as Raspberry Pi and Arduino. In addition to its standard product offerings, Waveshare also provides custom design and manufacturing services to meet the specific needs of customers.

Waveshare has always been committed to providing high-quality electronic products and services. Its products are certified by CE, FCC, RoHS, and other certifications, and have been recognized and praised by global customers. The company adheres to the concept of "Making Innovation Easier" and is dedicated to providing customers with simpler and more reliable electronic products and solutions, providing strong support for electronic enthusiasts and developers worldwide. Whether you are a professional engineer, a student, or a hobbyist, Waveshare has the products and services you need to bring your ideas to life.
